

Only work with  
clean data.

Wouldn't have it any other way.

# Find data happiness from 50 cents per customer.\*

Identify discrepancies, errors or missing information and **ensure all your data is good to go!** *Investigate* automatically and systematically checks data across any number of platforms.

## How does Investigate work?

*Investigate* manages data quality risk by facilitating **prevention**, **detection** and **correction** of data errors. The platform is a **technology-agnostic solution** meaning it amalgamates disparate sets of data into a single vantage point that manages data quality on a repeatable and auditable basis.

Simply connect *Investigate* to any number of data sources.

Achieve a single view of data quality across your whole organisation.

Gain control of with timely diagnostics, resolutions and reporting.

## Why is Investigate right for us?

*Investigate* is **purpose-built to meet data standards and requirements in financial services**. Implementation is typically executed inside three days and we provide ongoing advanced technical support to ensure *Investigate* is fully utilised.

Purpose built for financial services

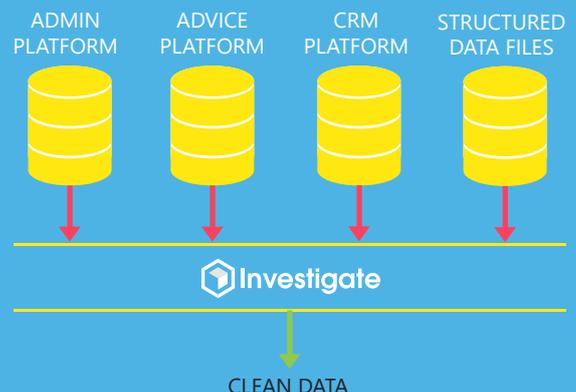

Speed of implementation

Advanced technical support

## Practical example of Investigate

The data inputs are anything you like! The output quite simply is clean, fit-for-use data across your entire organisation. *Investigate* transforms data doubt into data confidence.

\* per annum value based on average *Investigate* license fee divided by average number of customers.

# Industry leaders in data quality

Investigate is proud to work with the following financial services organisations who are [leading the way with data quality](#) management.

## Why your organisation needs to take a serious look at Investigate...

### Your organisation has disparate data inputs.

Data held by superannuation, insurance, wealth management and banking organisations is inherently prone to error because it is sourced from a multitude of disparate inputs; employers, customers, advisers and more. Increasing the complexity further are multiple data inputs via digital, voice and paper channels which is then computed by systems, updated by insurers, updated by the ATO and so on.

### Data quality management is mandatory for success.

Effective every day customer experiences are the foundation of success. Targeted marketing, artificial intelligence, operational process, audits, compliance and reporting heavily rely upon the quality of the data in use.

### Big data plans are foiled by misinformation.

Your organisation's competitors are aggressively pursuing sophisticated utilisation of big data. The important question is whether the data is 'good' before the deep dive. If it is not good, big data plans are foiled by misinformation which leads to weakening competitive advantage, reputation loss and erosion of customer trust.

## Core features

- ✓ System agnostic solution
- ✓ Rule groupings (playlists)
- ✓ Issue tracking history
- ✓ Historical reports
- ✓ Data validation rules
- ✓ Automated schedules
- ✓ Interactive dashboards
- ✓ Data reporting rules
- ✓ Knowledge management
- ✓ Issue management
- ✓ Current state reports
- ✓ In-built test functionality

# Investigate modules

## DISCOVER

Integrate any database source for business and IT systems to any number of scripts covering regulatory, legislative, fund, policy and system rules. Easily script new rules and configure scheduling to identify the latest data breakages for analysis and rectification.

## RESOLVE

Review rule breakages from individual cases to trending across rules, systems and areas of interest. Assign cases to users to work through and track the progress of remediation activities throughout the life-cycle until verified as completed by automatically closing and identifying any new cases.

## CLARIFY

Report on rule breakages from top to bottom through the intuitive dashboard aimed at management and the suite of visual reports for comprehensive analysis. Apply filtering criteria to fit almost any reporting purpose and drill-down through results to view individual cases reported on.

## DECLARE

Track any correspondence life-cycle from membership statements to marketing campaigns across all members. Monitor the progress, report on key events and validate the disclosed information prior to sending out to ensure the distribution of accurate information.
